

# Automatic Application Monitoring

Deliver more business functionality, faster and better than ever.

Your success depends on the fast delivery of new, error-free application experiences. Organizations today are rapidly adopting highly dynamic software architectures, utilizing containerized microservices applications throughout the DevOps production pipeline. Automatic Application Monitoring oversees these architectures for faster deployment and scaling to meet business and market demand.

## How It Works

The automation technology discovers and monitors your full application stack.

You get immediate visibility into code performance for every software deployment.

AI delivers instant actionable information.

## Top Features

- ▶▶▶ Auto-discover and monitor the full infrastructure and application stack.
- ▶▶▶ Trace every request, everywhere, with 1-second, all-metric granularity.
- ▶▶▶ 3-sec. MTTA (time to acknowledge) - identify and fix issues before they cause any impact.
- ▶▶▶ Available as SaaS or On-prem

## Your Benefits

-  Free your developers to code for delivering new business functionality instead for monitoring.
-  Remove manual monitoring roadblocks that slow down your CD pipeline.
-  Have deployments auto-analyzed in seconds for immediate detection of poor performance or errors.
-  Always-accurate monitoring, regardless of how frequently your applications change.
-  Never miss an incident or its root cause with high-fidelity data. Enhance customer experience and minimize revenue loss by faster incident MTTAs and MTTRs.

## About GlobalDots

GlobalDots is a 17-year world leader in cloud innovation, connecting businesses with the latest cloud & web technologies. Fusing an insatiable hunger for innovation with a diligent team of hands-on experts, we help our customers maintain an up-to-date technology position in a quickly-changing world. We consult, resell, implement, and customize full-stack solutions, including cost & performance optimization, security, connectivity, and managed services, to streamline business processes and provide the foundation for sustainable business growth.
